

Introducing Amplio's New, Evidence-Based Morphosyntax Programs

Did You Know...

Nearly 95% of elementary school SLPs work with students who have critical needs in syntax and morphology (ASHA, 2022)?

Despite this high demand, the availability of evidence-based resources targeting these vital areas remain a significant challenge for speech-language professionals.

Helping Speech-Language Providers Unlock Language Complexity

Amplio's new morphosyntax programs are designed to bridge this gap, providing school SLPs with evidence-based resources that are as engaging as they are educational. These new programs offer:

- Targeted Activities: Stories and interactive activities designed for individualized learning – perfect for students in grades K-3.
- Structured, Systematic Approach: From basic parts of speech to complex sentences, our programs cover all key components of morphosyntax.
- Certified Excellence: Crafted by experts, our programs are grounded in research and certified by Digital Promise.

Meet the New Programs:

POSE (Parts of Speech Exploration)

This program focuses on individual parts of speech, introducing learners to target pronouns, nouns, verbs, and adjectives – the building blocks of sentence structures.

MAPS (Morphological Affixes - Prefixes and Suffixes)

This program introduces students to beginner and intermediate base words, prefixes, and suffixes.

SAIL (Syntax Acquisition Incorporating Literacy)

This program uses themed stories and activities to support students as they learn the rules of syntax. SAIL targets noun phrases, verb phrases, simple sentences, compound sentences, and complex sentences.

Ready to incorporate Amplio's morphosyntax programs into your district's toolkit for speech-language providers?
